Glenn Greenlees is pleased to announce that his company Standard Industrial Cleaning Systems Ltd has been formally appointed as a Technical/Associate Member of the British Turned Parts Manufacturers Association (BTMA) in an advisory capacity on matters pertaining to industrial cleaning and degreasing.

With the massive changes in legislation concerning environmental and Health & Safety issues such as the reclassification of some organic solvents widely used in industrial cleaning applications and, in particular, the Solvent Emission (England & Wales) Regulations 2004 our industry has been thrown into turmoil with mis-information and mis-selling abounding.

The biggest question for the potential investor in new technology often remains the choice of aqueous cleaning versus solvent degreasing and many suppliers of each technology will vigorously promote their own wares in the pursuit of profit often at the expense of offering best advice and a working practical solution.

Standard Industrial Cleaning Systems offers a full range of both processes with the commitment to giving fair and unbiased technical recommendations and the guarantee of long term success.

Standard Industrial Cleaning Systems has an impressive client base ranging from small turned parts to large aerospace fabrications and the director is proud to have had a number of articles published in related trade journals.

Glenn commented "I am very much looking forward to an active role within the BMTA in advising member companies on their specific cleaning applications and requirements".
